Simplifying Safety

HIT-NOT®'s Proximity
Warning System Eliminates
STRUCK-BY Accidents

- May Reduce Insurance Premiums
- Reduces the potential for Workman's Compensation Claims
- This System's Use Has Been Made Mandatory by Fortune 500 Companies
- Works on Moving Mobile Equipment
- Vehicle-to-Vehicle Warning System Available
- Improves Safety Awareness
- Silent Zones are available for Safe areas near Forklift Paths

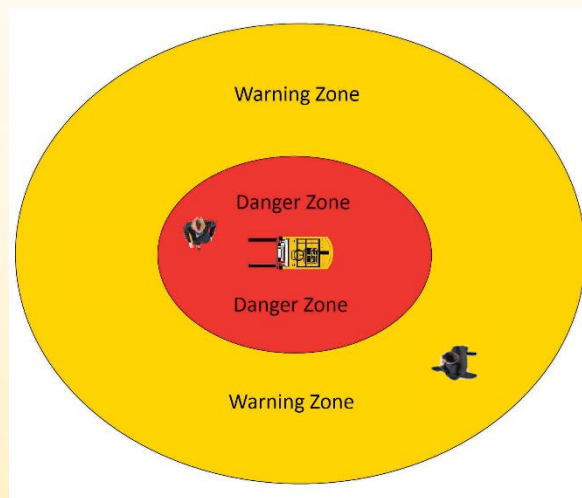

Originally developed for use in underground coal mines, this technology has been adapted and upgraded to essentially eliminate STRUCK-BY accidents in the forklift industry.

HIT-NOT®'s System generates a low frequency adjustable oval-shaped Magnetic Field, and when the PAD-Personal Alarm Device-which is worn by personnel enters any of the HIT-NOT® Safety Zones, both an accurate Audible and a Visual Warning are given to your personnel as well as to the Fork Lift Operator, alerting both of the potential danger.

PAD Types

The PAD—Personal Alarm Device with an accurate Visual and Audible Alarm is available in several configurations including:

- Safety Vest Pocket
- Arm Band
- Velcro Attachment
- Hard Hat Mounted

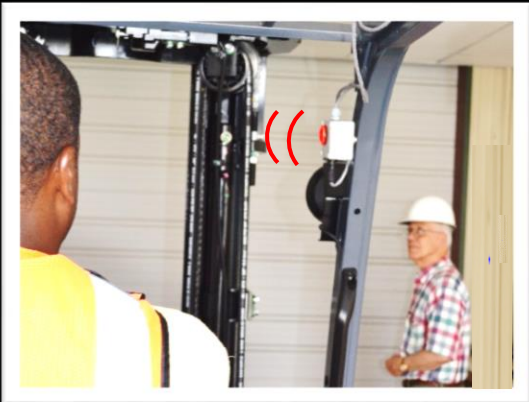

Simplifying Safety

CUSTOM SOLUTIONS

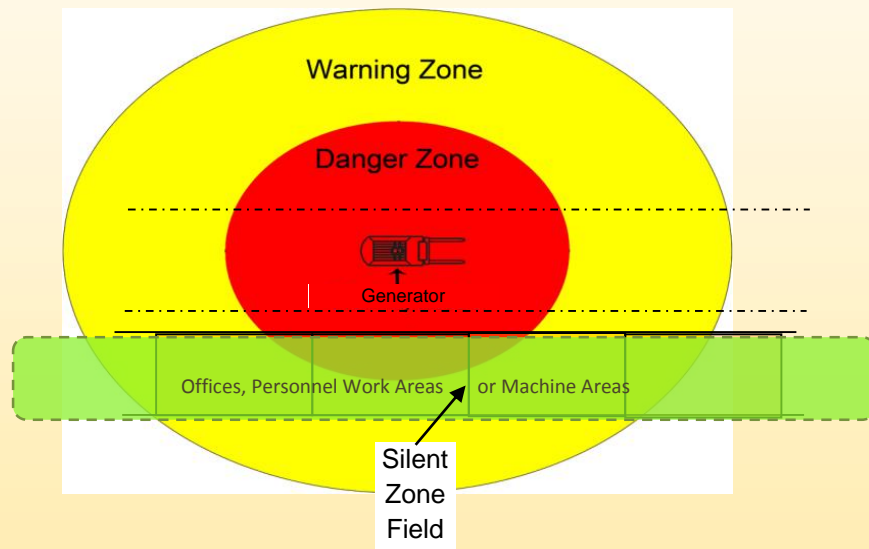

Our Proximity Warning Safety Specialists customize each system to provide the Optimum warning coverage for your facility.

SILENT ZONES

Silent Zones are used to create areas where the warnings emitted by the Personal and Vehicle Alarm Devices are ignored. Silent Zones are standard on the vehicle for the Operator but can also be installed in locations where personnel are protected by walls and guard rails. Personnel in Offices and Machine Areas will not be distracted by the warning signals as vehicles drive by. Silent Zones can be Oval in shape up to 22 feet in diameter or Linear up to 250' in length.

Typical Silent Zone Locations

- Cab of Forklift
- Safe Areas Protected by Guard Rails
- Offices with vehicle paths nearby
- Personnel Work Areas

Simplifying Safety

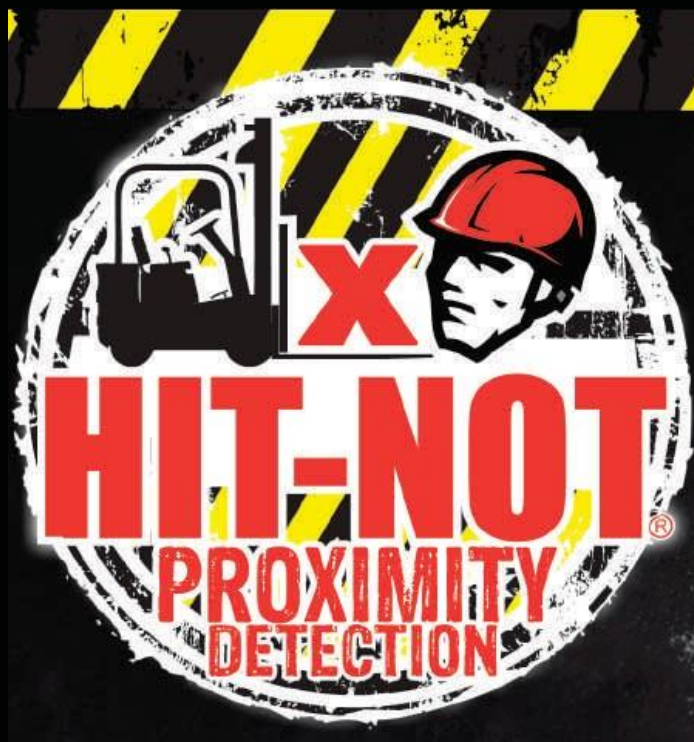

HIT-NOT® Proximity Detection Systems virtually eliminate STRUCK-BY Accidents. The Patented HIT-NOT® System provides a very precise and very reliable system which is not prone to the false alarms or nuisance alarms which occur with RFID systems.

The key to the system is the Personal Alarm Device or PAD which is worn by personnel and vehicle Operators on either a vest, shirt or hard hat. The PAD gives both Audible and Visual LED Warnings when you are threatened. It also transmits a signal to the vehicle, to let the Operator know you are in danger. Both alarms will help to avoid a collision. There is no limit to the number of Forklifts, Personnel Carriers, AGVs, other vehicles or PADs which can be used at one time.

By essentially eliminating STRUCK-BY Accidents in your facilities, you improve the efficiency of your entire Company.
